23 March 2012

Engineering Data

- ▶ Different types of data each time
- ▶ Mix of common and obscure/proprietary formats
- ▶ Mix of confidential and unrestricted data
- ▶ Very hard to look at a directory of data files and know what it all means

Project Record Manifest template

Project Data Record Manifest Template for IdMRC Projects

The **Project Data Record Manifest (PDRM)** constitutes the principal conduit through which the records relating to a research project may be identified and retrieved. It must be located in a publicly accessible and searchable place. The default location is an anonymous log-in page of the research project web.

The **Project Data Management Plan** and the **Project Data Record Manifest** should be considered a pair, and should be co-located.

The PDRM should be **read-only**, editing rights being limited to members of the originating research project team and by other nominated individuals such as the data manager. A versioning system must be in force.

Whilst the PDRM will be globally available, there will be some records associated with the research project which are confidential or sensitive. Access to records of this nature must be limited by placing the records in appropriately password-protected locations; this could be BUCS file space or within the research project web or other web space. If in doubt, the advice of the data manager (or failing that, the project PI) should be sought.

Summary of Research Activity

Project name
e.g. Long And Technical Textual Evaluation (LATTE)
Period of Project
e.g. October 2009 – March 2011
Lead and partner organizations
e.g. University of Bath (lead), University of Cambridge, University of Leeds
Principal Investigator (name and contact details)
Name:
Contact details:
Data access summary
Data access refers to the physical means by which access to records is constrained. The overarching data access provisions for this research project are recorded in the DMP associated with this PDRM. For details of confidentiality status of individual records see the Project Data Record List below. As a guide, data access should be either consistent with or more restrictive than the confidentiality status.
Retrieving repository
e.g. The data from this Research Activity will be deposited according to the IdMRC DMP (see below), or The data from this research activity will be deposited in _____

Project Data Record List

Every project data record should be listed in the table below in the form: Title, file name, record type, location, owner and contact details, confidentiality status

Record Type (for both electronic and physical records)

Every data record will be one of the following: research data record, content data record, associative data record, research object data record, experimental apparatus data record

Location

If all the files are archived in a single, central location, the location need be identified for the set of records (the Data Case) only. For electronic records it is expected that a hyperlink or filepath to the location is recorded. For physical records the location should be described.

Owner

The 'owner' is the person currently responsible for the management of the record, and who is in a position to consider matters such as availability and security. Ownership does not imply any rights to use or disposal. During the period that the research project is active, it is likely that the owner will be a research officer or an individual in a supervisory role. At project end the ownership should be transferred to an appropriate individual, such as the project PI or the data manager responsible. In many cases it will be appropriate for a research officer to retain ownership.

Confidentiality Status

Confidentiality status indicates what classes of people and what automated information-gathering systems may have sight of the data record; it does not provide information about how such records are protected. It is likely that the confidentiality status will change during the life-cycle of the data record, in which case the status must be updated. Access is either free or limited. If access is free, then the term 'public domain' should be used. If the access is limited, then the entities who are permitted to see the data should be identified either by naming groups or individuals.

Record Title	File Name	Owner	Contact Details	Data Record Type	Confidentiality Status
Example: IdMRC Research Project Data Record Manifest	entirement/152/179/d	Mansur Dierflinger	entred@bath.ac.uk	associative data record	public domain

Project Record Manifest template

Record Type (for both electronic and physical records)

Every data record will be one of the following: *research data record, context data record, associative data record, research object data record, experimental apparatus data record.*

Location

If all the files are archived in a single, central location, the location need be identified for the set of records (the Data Case) only. For electronic records it is expected that a hyperlink or filepath to the location is recorded. For physical records the location should be described.

Owner

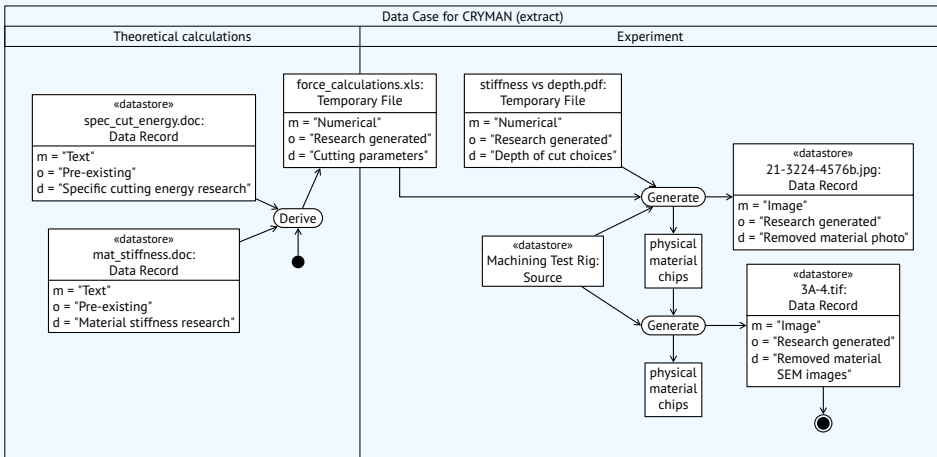

The 'owner' is the person currently responsible for the management of the record, and who is in a position to consider matters such as shareability and security. Ownership does not imply any rights to use or disposal. During the period that the research project is under way it is likely that the owner will be a research officer or an individual in a supervisory rôle. At project end the ownership should be transferred to an appropriate individual, such as the project PI or the data manager responsible. In many cases it will be appropriate for a research officer to retain ownership.

Confidentiality Status

Confidentiality status indicates what classes of people and what automated information-gathering systems may have sight of the data record; it does not provide information about how such records are protected. It is likely that the confidentiality status will change during the life-cycle of the data record, in which case the status *must* be updated. Access is either free or limited. If access is free, then the term 'public domain' should be used. If the access is limited, then the entities who are permitted to see this data should be identified either by naming groups or individuals.

Record Title	File Name	Owner	Contact Details	Data Record Type	Confidentiality Status
<i>Example:</i>					
<i>IdMRC Research Project Data Record Manifest</i>	<i>erim6man110217mjd</i>	<i>Mansur Darlington</i>	<i>ensmd@bath.ac.uk</i>	<i>associative data record</i>	<i>public domain</i>
